## Product Review - Pedalite

***Pedalite, the brilliant new pedals that could save your life! Battery-free 360° visibility pedal lights of the fit and forget kind.***

During my visit to the [Cycle Show 2007](#) I was kindly given a set of Pedalite pedals for review and on Wednesday, October 17, 2007 I finally got around to fitting those innovative pedals to my general bicycle, an oldish Raleigh Pioneer Classic, one that has still been hand-built in Nottingham.

The fitting was an absolute doddle once I had managed to get the old, and by now well past use-by date, pedals that I was in fact still using on that bike off. I know I should have had new ones fitted a long time ago as the reflectors had all, bar one, broken off but I never got around to doing so. Thanks to **Chris Stimpson** from Pedalite International Ltd. who kindly provided the review set there now are new pedals on that cycle and I shall report a little more in due course on how they work and ride in day-to-day use. (So stay tuned for those little reports over the next couple of months).

Pedalite Pedals are the unique battery-free pedal lights that have been designed to make cyclists more visible to motorists, day and night, from a distance of 1km away and from any angle, including the side. As soon as you start pedalling the Pedalites uniquely harvest and store a small amount of energy so the lights continue to flash when the cyclist is freewheeling or has stopped at a road junction.
